Table of Station Assignment and Service Information October 7, 2004

NTSC and DTV facilities are identified in the following order on this table. First, the table lists facilities authorized by a construction permit (CP), if the station has one. Second, if the station does not have a CP, the table lists facilities authorized by a license, if the station has one. Third, if the station does not have either a CP or a license, the table lists DTV facilities as authorized by its DTV allotment, either in the initial DTV Table of Allotments or in an individual rule making proceeding.

Data for single-channel DTV and NTSC stations appear at the end of the report.

The ERP columns are effective radiated power in kilowatts. The HAAT columns are antenna height above average terrain in meters. For both NTSC and DTV facilities, if the authorized antenna height above average terrain (HAAT) is zero or negative, the value in the table has been rounded up to a positive 01 (stations in this situation should not consider this to be an error). The location columns are latitude over longitude, expressed in degrees, minutes and seconds as DDDMMSS.S.

DTV pop and area columns are the population and area (people and square kilometers) within the DTV service contour where service is predicted based on consideration of intervening terrain and interference from other DTV and NTSC stations.

Some changes will continue to be made to reflect data base error corrections that have been submitted to Video Division. In addition, changes will be made to reflect grant of applications for construction permits or modification of construction permits, including applications to implement DTV channel changes approved in rule making proceedings. A limited number of proposed data changes are not fully reflected in this Table.
